About the story: Read this story to find out about a harbor seal pup that has a special problem.

In the sea, a harbor seal pup learns to catch and eat fish by watching its mother. By the time it is weaned, at the age of four or five weeks, it is able to feed on its own.

Without a mother, and living temporarily in captivity, Pearson had to be taught what a fish was and how to swallow it. Eventually, he would have to learn to catch one himself.

Holly started his training with a small herring—an oily fish which is a favorite with seals. Gently, she opened his mouth and slipped the fish in headfirst. Harbor seals have sharp teeth for catching fish but no teeth for grinding and chewing. They swallow their food whole.

But Pearson didn't seem to understand what he was supposed to do. He bit down on the fish and then spit it out. Holly tried again. This time, Pearson got the idea. He swallowed the herring in one gulp and looked eagerly for more.

Within a week, he was being hand-fed a pound of fish a day in addition to his formula. This new diet made him friskier than ever. He chased the other pups in the outside pen. He plunged into the small wading pool and rolled in the shallow water, splashing both seals and people.
